ABSTRACT

Soaring values of agricultural land have created inequities in funding between urban and rural school districts in Minnesota. The state's Foundation Aid to school districts is formulated so that districts of high property valuation receive less Foundation Aid than those districts with low property valuation. In recent years inflation has had unequal effects on property values, with agricultural land values rising twice as much as those of metropolitan residential property. Consequently, in 1978-79 some smaller than average schools with a proponderance of agricultural land in the district received no Foundation Aid at all. This inequity is the major problem that must be confronted within Minnesota's present system of school financing, according to the 135-member task force appointed by the Citizens Countryside Council to research into the factors affecting school financing in southwestern and west central Minnesota. This final report of that task force includes a description of the Foundation Aid System and how it is formulated, as well as the findings, conclusions, and recommendations of the task force. Much of the document consists of tabular data on such areas as total pupil units, valuations, estimated Foundation Aid and local revenues on each of the school districts in the Council's 19 service areas. Somewhat similar data for all the school districts in the state is also given. (DS)

ACKNOWLEDGEMENTS

The Countryside Council's School Finance Task Force extends its appreciation to Mr. Dan Loritz, Mr. Dennis Erno, Mr. Wayne Budde, Mr. Douglas Tiffany, and Mr. Tom Halbach for their contributions to the task force's research.

INTRODUCTION

At its August, 1978 meeting, the Countryside Council adopted a resolution authorizing "a task force on school finance to investigate the sources and disbursements of school district revenues." The resolution referred to inflation in the market value of property, more specifically as it affects agricultural land, declining enrollments as they relate to school finance, and to the practice of basing EARC valuations on the inflated market value of property, and the need to preserve rural schools as the compelling forces behind the initiation of the School Finance Task Force. The Task Force was further charged by the Countryside Council to complete its study of the issue and its final report on school finance to the Council by March 1, 1979 so that the Countryside Council could introduce its findings and recommendations into the 1979 session of the Minnesota Legislature.

Prior to the first task force meeting, the task force coordinator conducted a series of six public hearings on school finance. The purposes of the hearings were to solicit the input of the citizens of southwestern Minnesota regarding the conditions facing their own school districts and what factors should be preserved or changed in the present system of school finance in Minnesota; and to inform and recruit people to serve on the Countryside Council's School Finance Task Force. Public hearings were conducted in Willmar on September 20, 1978; in Appleton on September 21, 1978; in Redwood Falls, September 27, 1978; in Ormsby, October 4, 1978; in Edgerton, October 5, 1978; and in Ivanhoe, October 10, 1978. The information gathered at the public hearings was introduced into the deliberations of the School Finance Task Force at its second meeting to serve as a broad starting point for research into the factors within the system of financing school districts which affect, either constructively or adversely, the school districts in southwestern and west central Minnesota.

A wide variety of people were represented on the School Finance Task Force, all of them citizens of southwestern Minnesota who volunteered their time and effort to research this issue. Small business people, farmers, housewives, and parents comprised about two-thirds of the task force; school administrators, teachers, and board members, about one-third. One hundred and thirty-five people from southwestern Minnesota served on the task force.

The task force brought in resource people in order to become fully informed about the principles of Foundation Aid and Minnesota's Foundation Aid formula. Mr. Dan Loritz, from the Department of Education, explained the rationale behind the Foundation Aid system in Minnesota and went into detail about the technical workings of the foundation aid formula. Mr. Dennis Erno, from the Department of Revenue, explained the methods used by the Equalized Aid Review Committee to compute the adjusted assessed value of property for the purposes of foundation aid. Mr. Douglas Tiffany, an agricultural economist retained by the EARC to develop an alternative method for computing the adjusted assessed value of agricultural land, explained the work he has been doing. Mr. Wayne Budde, Lyon County assessor, and Mr. Craig Zinter, Lac Qui Parle County assessor and School Finance Task Force member, explained the role of the county assessor in the process of school district taxation and the foundation aid system. Mr. Tom Halbach, Extension Community Development Specialist, presented a number of alternate ways that school districts might be financed.

The School Finance Task Force researched data related to state income and sales taxes paid by each school district in the state, the amounts of Foundation Aid paid to each school district, the amounts of locally generated revenues used for maintenance in each school district, the amount of Homestead credit and ag credit paid back to each school district by the state, and the average federal adjusted gross income for each school district in order to come up with its findings, conclusions, and recommendations.

On February 21, 1979, the School Finance Task Force sent its representatives to testify before the Senate Subcommittee on Education Aids, and the House Subcommittee on School Aids. Task Force members testifying before the two subcommittees were: Larry Leach, Task Force Chairperson, Milroy, MN; Gordon Alexander, Wabasso, MN; Craig Zinter, Madison, MN; and Lawrence Bergemann, Welcome, MN.

The Task Force's recommendations to require the EARC to use the capitalized rental value of agricultural land in computing the adjusted assessed value of agricultural land for the purposes of the Foundation Aid formula has been introduced into the Senate by Senator Hanson, and several other Senators including Senator Setzepfandt of Bird Island. Senator Jenson also has submitted a bill which would use five-year land bank interest rates to set the capitalization rate to be utilized in the formula to determine fair market gross rental value.

The Task Force testimony before the House and Senate Subcommittees completed its responsibilities under the charge it received in the Countryside Council resolution authorizing the School Finance Task Force.

MINNESOTA'S FOUNDATION AID FORMULA

Since the School Finance Task Force's energies have been primarily directed toward the scrutiny of the Foundation Aid formula and its consequences for southwestern Minnesota school districts, it will be helpful to examine the formula in some detail.

"Foundation aid" is unrestricted funds which are available to each school district in the state to meet its current operating costs. The Foundation Aid formula in Minnesota sets the total amount of dollars that a school district can spend for operating costs, and also sets the amount of that total will be paid through local property tax and through state Foundation Aid. The Foundation Aid system has been defined in a Department of Education publication as follows:

> The concept of the foundation program is that of establishing an equitable partnership between the state as a whole and the individual school systems charged with the responsibility and privilege of operating public schools. Its purpose is to assure the financing of an acceptable educational offering in all school systems regardless of their taxpaying abilities.

Under the current formula, the amount of Foundation Aid paid by the state to the local school district depends upon the amount of revenue raised by local levy upon the property in the district. Those districts with high property valuation will receive less state Foundation Aid than those districts with low property valuation.

The basic workings of the Foundation Aid formula can be expressed through the following series of formulas.

The total dollar amount that each school district can spend for operating costs, or the "guaranteed basic maintenance revenue," is arrived at by adding the Foundation Aid to the amount of local revenue generated by the local EARC maintenance levy.

Total Dollars for operating costs = Foundation Aid + revenues generated through local levy

The total dollars for each school district are arrived at by multiplying the total number of pupil units in the school district times the formula allowance. The formula allowance is an amount of money set by the state legislature and considered to be a reasonable estimate of what it costs to educate one pupil unit for one year. In 1978-79, the formula allowance is $1095.00 per pupil units. Pupil units are not equal to students in attendance. Because the legislature determined that it costs more to educate a secondary student (grades 7-12) than it costs to educate elementary (grades 1-6) students, and Kindergarten students they devised a system whereby the various levels of students would be weighted according to the relative costs of educating them.

Elementary students are weighted at 1.0. Kindergarten students, since they attend school only half a day are weighted at .5, and secondary students, because they require more specialized courses, are weighted 1.4.

There are three other categories of weightings for pupil units; support pupil units, fast growth pupil units, and Aid to Families with Dependent Children pupil units. Although the discussion of these weightings for pupil units will remain general here, some definitions are required. All three categories are for the purpose of providing more total dollars to school districts with special problems. Support units are provided to school districts suffering declining enrollments in order to soften the loss of revenue that comes with the loss of students. Fast growth units are provided to district whose enrollments have increased by at least two percent over the previous year in order to help that district in providing more textbooks, new teachers if necessary, etc. AFDC units are provided to school districts to contribute to the extra cost of educating disadvantaged students.

The total pupil units for each school district is obtained by adding together all the various weightings as they apply to different students.

The revenue generated by the local levy is arrived at by multiplying the mill rate, (which is also set by the state legislature), times the adjusted assessed valuation of property in the school district. For 1978-79, the mill rate was set at 28 mills; in 1979-80, the mill rate will be 27 mills.

The adjusted assessed valuation is computed by the Equalization Aid Review Committee, consisting of the Commissioners of Revenue, Education, and Administration, by comparing the county assessor's valuation to the market value of property as determined by recent sales in each school district. The EARC conducts a sales ratio study for each school district each year. The three most recent years are used in computing the EARC adjusted assessed valuation. The EARC, through its sales ratio studies determines the percentage of the county assessor's valuation to the recent sales in each school district; that percentage is then used to adjust the valuation of all property in the school district regardless of when it was sold, or what was paid for it on the market at the time of its purchase.

The Foundation Aid formula, broken down to its parts, looks like this:

Total dollars (pupil units X formula allowance)	=	Foundation Aid	+	Revenues generated through local levy (mill rate X adjusted assessed valuation)

In order to determine the amount of Foundation each school district is eligible to receive from the state, the components of the formula are rearranged algebraically into the following formula:

Foundation Aid =	pupil units	X	formula allowance	-	mill rate X	adjusted assessed valuation

For example, if we take the data for Sleepy Eye school district in Table One, we can fill in the formula as follows:

Foundation Aid	=	Pupil units	X formula allowance	-	mill rate X	adjusted assessed valuation
$104,274.08	=	997.14	X $1095.00	-	.028	X $35,271,222.00
		($1,091,868.30)			($987,594.22)	

The total dollar amount that Sleepy Eye school district can spend during 1978-79 for its basic operating costs is $1,091,868.30. Of that amount, $987,594.22 will be paid through local property taxes and $104,274.08 will be paid by the state to the school district.

When the Foundation Aid formula was initially constructed, it was the intent of the legislature that the local property tax would pay for approximately thirty percent of the maintenance costs for school districts, and that the state would pay for approximately seventy percent of those costs. The reason for this intent was that the legislature considered the property tax to be an inadequate measure of the taxpayer's ability to pay the tax, and that the income and sales taxes, which are the sources for state Foundation Aid, were more progressive. The income tax was considered more progressive because as one's taxable income increased so did the tax rate levied against that income. The sales tax was considered progressive because, since food, clothing, and medicine were exempted, (the so-called necessities of life), those who paid more sales tax would be doing so because they had the income to spend on non-essential items.

In addition, the state pays two credits to school districts regardless of what that school district does or does not receive in Foundation Aid. The property taxpayers of Minnesota are forgiven part of their property tax through the Homestead Credit. Farmers are forgiven part of their property tax through the Agricultural Credit which relates only to school district taxes. The ag credit is 15 mills on homesteaded acres (160) and 10 mills on non-homesteaded acres. However, in order that the school district will not lose these sources of revenues, the state pays these credits to the school district out of revenue generated by the state's income and sales taxes. The ag credit payments, since they deal only with school district taxes, are paid directly to the local school districts by the state. The Homestead credits are paid to the county auditor who then distributes them to the various local taxing districts.

This has been a brief discussion of Foundation Aid meant to clarify the principles of Foundation Aid and the Foundation Aid formula as a prelude to discussing the task force's recommendations regarding the system of Foundation Aid in Minnesota.

SCHOOL FINANCE TASK FORCE RECOMMENDATIONS

The School Finance Task Force identified two major issues in the financing of school districts that affect the school districts in southwestern and west central Minnesota that are consequences of the current school finance system in Minnesota.

1) Total dollar issue:

The Foundation Aid formula limits the total dollars that each school district can spend for its operating costs, (short of a referendum within the school district). That total dollar amount is tied to the number of pupil units in each school district. As school districts suffer declining enrollments, the total amount of money available to those districts for the purpose of operating the schools (paying for heat, light, books, teachers, etc.) becomes less. However, these fixed costs, much less remaining the same, are increasing each year. As inflation raises the fixed costs of operating the school district, declines in enrollment reduce the amount of money available to school districts to meet those costs. This problem is exacerbated by the fact that, while inflation has occurred at a rate of anywhere from eight to ten percent per year, the formula allowance per pupil unit has increased at only a rate of five to six percent per year. School districts have therefore been hindered in meeting their operating costs in two ways: first, through the loss of revenue because of declining enrollments; and second, because the formula allowance has not increased at the same rate as the rate of inflation.

2) Equity issue:

The Foundation Aid formula was constructed to put the principle of each school district supporting itself according to its ability to do into practice in Minnesota. The School Finance Task Force found that, at least in southwestern Minnesota, it has failed to do, and has therefore created a serious inequity in the state's system of financing school districts' operating costs. School finance in southwestern Minnesota has become less and less a true partnership between the state and the local school district. The reasons, which will be documented more thoroughly in the findings and conclusions section, again are rooted in inflation. Because the EARC adjusted assessed value is heavily tied to the market value of property, it has come under the sway of inflation. However, inflation in Minnesota has not affected all classes of property in the same way, and it has not occurred at the same rate in all parts of the state for the same class of property. The task force found that the market value of agricultural land has increased at a rate of 23% per year for the years 1975, 1976, and 1977, and about 15%-16% in 1978. On the other hand, the market value of metro residential property increased at a rate of 11% per year for the years 1975-1977, and at 21-22% during 1978. The result has been an inequitable increase in school district EARC valuations which, (for the purposes of Foundation Aid), favors the metro area over rural areas, and favors school districts with larger towns within them over school districts with smaller towns. Geographically, within the agricultural sector, inflation has been tremendously high, and tremendously unequal. The map on the following page shows the percent of inflation in agricultural land and farm buildings over the period between June, 1972 and January, 1977. As can be seen, the state-

wide average for inflation in agricultural land was 293%. The average rate of inflation in agricultural land in the Countryside Council's service area was 346%. The result of this unequal inflation and its reflection in EARC adjusted assessed valuations of property, has been a loss of state Foundation Aid in the school districts in southwestern Minnesota, (though not all of them), and in some cases a complete loss of Foundation Aid.

Based upon the School Finance Task Force's consideration of these two issues, the following recommendations have been formulated.

1) Only the rent-capitalized value of agricultural land should be used by the EARC in computing the adjusted assessed value of agricultural land for the purposes of the Foundation Aid formula.

2) The formula allowance in the Foundation Aid formula should be increased each year at no less than the general rate of inflation.

3) School district numbers should be returned to state income tax returns and be used in determining each school district's average Federal adjusted gross income in order to compare income, as a measure of that district's ability to pay, and EARC valuation.

4) Each school district should be guaranteed that at least thirty percent of the formula allowance per pupil unit be paid through state Foundation Aid to school districts. For example, this recommendation would mean that in 1978-79 each school district in Minnesota would have received at least $328.50 per pupil unit in Foundation Aid. Revenue generated through the local levy would be added to this base figure, and if the total of the guaranteed base and the locally generated revenue still did not equal the formula allowance per pupil unit amount, the state would pay the difference in line with the current method of distributing Foundation Aid. For 1979-80, the guaranteed amount would be $339.00, thirty percent of $1130.00 per pupil unit.

5) The state should fully fund all mandated programs since 1971-72 through the State's General Fund.
   a) Beginning in 1979-80, all mandated programs initiated by the legislature shall automatically expire during a period not to exceed five years after enactment. In order to continue, each program must be reviewed by the legislature and re-enacted into law for another five-year period or dropped. The process of review shall occur every five years.

   b) All mandated programs passed previous to 1979-80 shall be reviewed by the legislature during the 1980 legislative session. In order for these programs to continue they must be re-enacted into law for a five-year period or dropped. This process shall occur every five years thereafter.

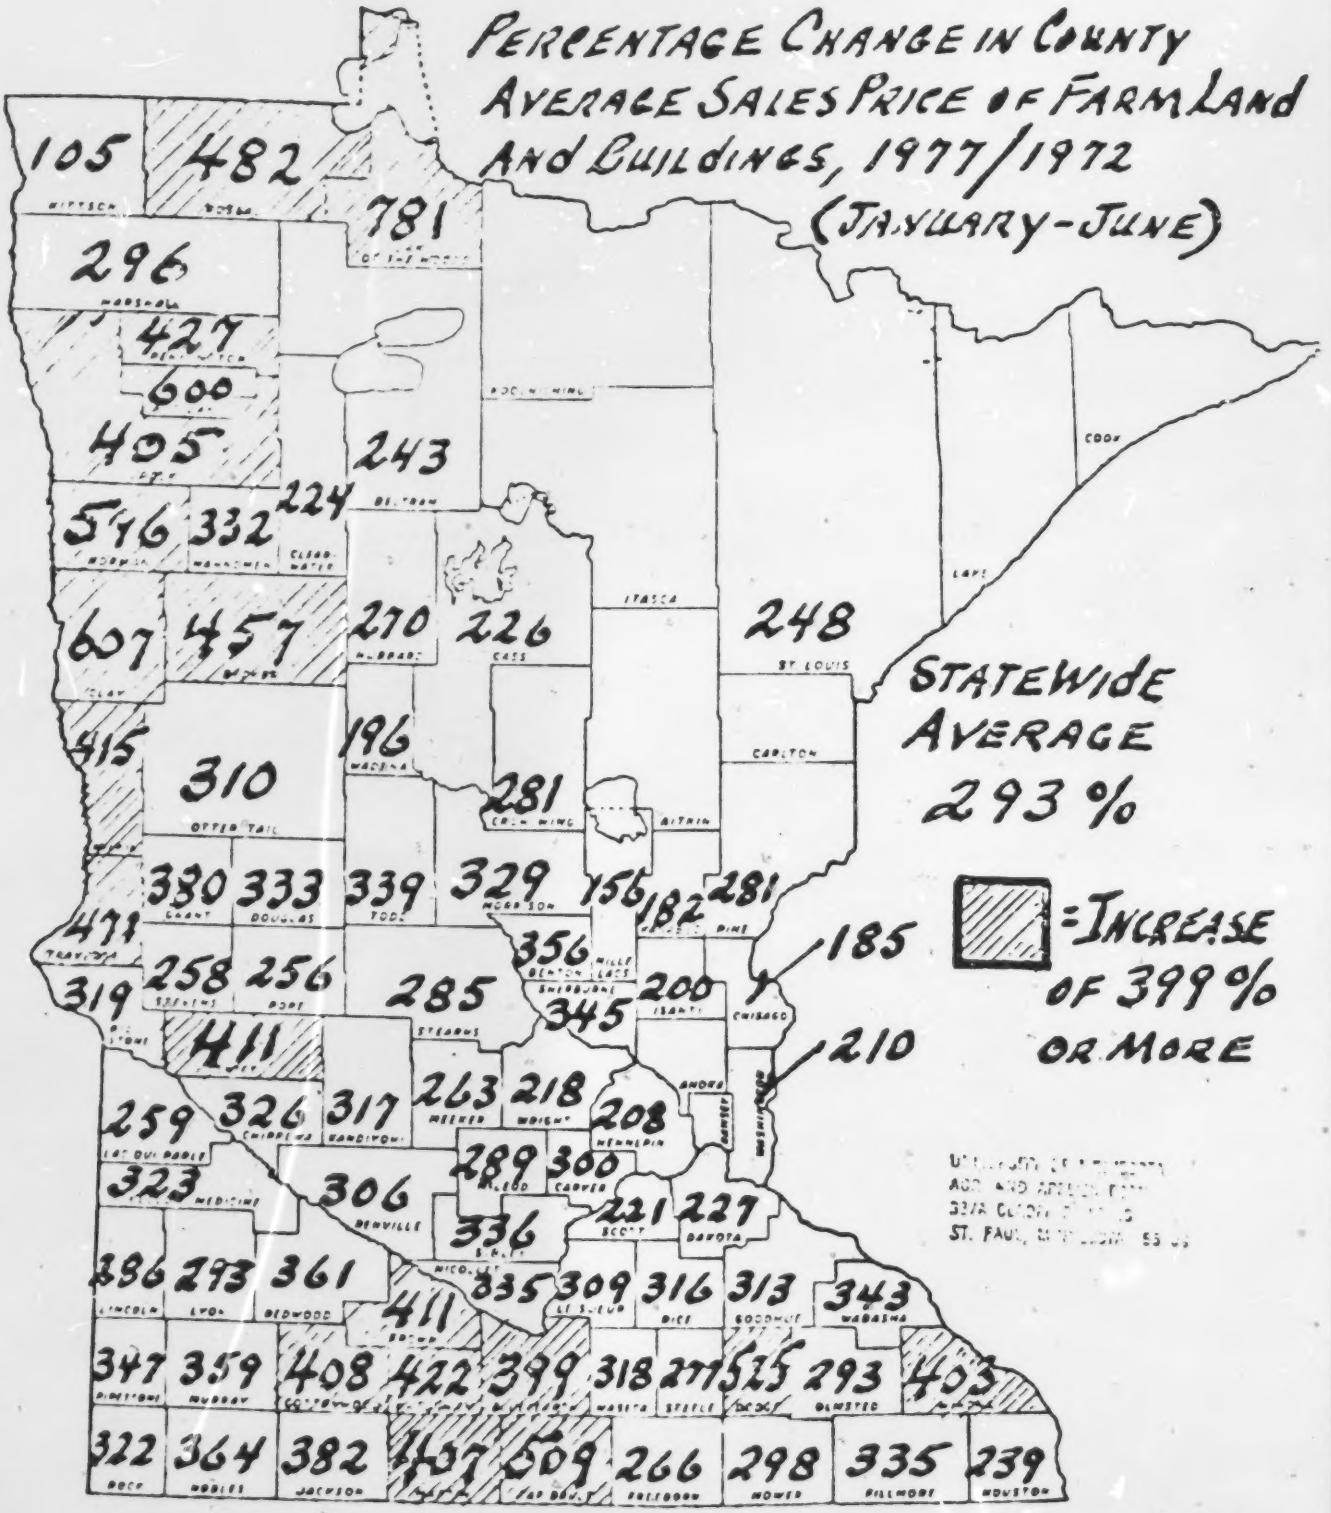
MINNESOTA

PERCENTAGE CHANGE IN COUNTY AVERAGE SALES PRICE OF FARM LAND AND BUILDINGS, 1977/1972 (JANUARY-JUNE)



8

Source: Dr. Philip M. Raup, (distributed with speech presented at Minnesota Farm Managers and Rural Appr rs Conference). February 10, 1978, Curtis Hotel, Minneapolis, Mn.

FINDINGS AND CONCLUSIONS

The issue of school finance is primarily a taxation issue. The School Finance Task Force found that the major problem that must be confronted within the present system of school financing is the inequity that exists between urban and rural school districts in terms of Foundation Aid received.

For example, the task force found that for 1978-79, six of the thirteen school districts projected to receive no Foundation Aid were in southwestern Minnesota, in smaller than average school districts, with a preponderance of agricultural land in the district. Two of the seven also had well-attended parochial schools within the district which was more debilitating to the performance of the school district in the Foundation Aid formula.

Table One shows the Total Pupil Units, EARC Valuation, Estimated Foundation Aid, Local Revenues, EARC Valuation per Pupil Unit, Foundation Aid per pupil unit, Local revenues per pupil unit, and the state/local ratio of funds for school district maintenance for the school districts in the Countryside Council's 19-county service area in southwest Minnesota.

The first four columns of data are taken directly from Department of Education computer projections; the last four columns are based upon raw data from those projections. Six school districts were projected to receive no Foundation Aid in 1978-79. They are Okabena, Prinsburg, Trimont, Edgerton, Morgan, and Renville. Since these figures were computed Okabena has paired with Heron Lake, and Magnolia school district which was projected to receive .004 percent Foundation Aid will actually receive no Foundation Aid. Prinsburg and Edgerton both receive no Foundation Aid because of the private high schools with their respective districts which lowers the number of pupil units in the school district but leaves the EARC valuation, upon which the local levy is raised, the same. Renville school district is adversely affected, in terms of Foundation Aid, by the existence of the beet processing plant in Renville. The remaining school districts share several common attributes: they are all relatively small school districts, (Trimont has 348.05 pupil units, Morgan, 461.74, and Magnolia, 192.30), they all have small towns surrounded by a large proportion of agricultural land, which combines a low number of pupil units with a disproportionately high EARC valuation for the district because of inflation in the market value of agricultural land.

The following conclusions can be drawn from the data in Table One. Eleven and one-half percent of the school districts in the Countryside Council's service area receive less than ten percent Foundation Aid from the state. 24.2% of the school districts in the Countryside Council's service areas receive less than 25% Foundation Aid from the state. 70.5% of the school districts in the Countryside Council's service receive less than 50% Foundation Aid from the state. And finally, no school district in the area receives the intended 70% Foundation Aid from the stae. The best ratios of state paid Foundation Aid to locally generated revenue are Montevideo (129), Willmar (347), Lake Benton (404), Eden Valley (463), Dassell (466), and New London (345). Only these six school districts, projected to receive over 60% of school district operating costs from state Foundation Aid, come close to the intended 70% state-30% local breakdown of school district operating costs burden.

Tables Two through Five show state-wide figures for the school years 1972-73, 1973-74, 1974-75, and 1975-76 in nine categories. The categories Total expenditures, state and local operating costs, EARC value, Income, and state and local effective costs are all given per pupil unit in order to put all data on a comparable basis. The tables give the low district, high district, the fifth and ninety-fifth percentile rankings, and the state average figures for all school districts in Minnesota operating secondary and elementary schools.

Tables Six through Ten show the same data for the Countryside Council service area in southwestern Minnesota, which includes school districts in Brown, Chippewa, Cottonwood, Jackson, Kandiyohi, Lac Qui Parle, Lincoln, Lyon, Martin, Meeker, Murray, Nobles, Pipestone, Redwood, Renville, Rock, Swift, Watonwan, and Yellow Medicine counties.

Table Ten gives a comparison of the means (averages) of the state-wide data and the means (averages) of the Countryside Council service area data for each category. The table also shows the percentage of school districts in the Countryside Council service area which fall below are above the state-wide mean in each category. For example, in the enrollment trends category for the school year 1975-76, table ten shows that the state average enrollment trend was minus three percent and that the Countryside Council service area average enrollment trend was minus four percent, virtually the same as the state average. It also shows that forty-seven percent of the school districts in the Countryside Council service area suffered enrollment declines of three percent or more, and that by implication fifty-three percent of the school districts in the Countryside Council service area suffered declines of less than three percent. The table shows that in terms of enrollment trends, there is virtually no difference between the state-wide average and the Countryside Council average. Of course, if the total pupil units category is consulted, one will find that the number of pupil units varies greatly between the state-wide average and the Council's service area average which suggests that even though the enrollment declines in the school districts in our area are on a par with those suffered by all school districts in the state, the school districts in the Council service area don't have the numbers of pupil units needed to be able to effectively absorb the loss of students.

Table Eleven lists all the school districts in the state of Minnesota, and gives data for each school district in each of the nine categories. The raw data in Table eleven was used to develop the data in Tables Two through Ten.

The tables show the Countryside Council's service area to hold some of the smallest schools in the state. However, the difference may not be so great as suggested by the percentages in Table Ten which do not show that the Minneapolis and St. Paul school districts pull the state-wide average up considerably. The tables also show that the school districts in the Countryside Council service area are not losing enrollment at a rate that is greater than the rest of the state. One significant, and perhaps unrecognized aspect of the tables is that they show the school districts in the Council's service area to be relatively cost effective when compared to the state-wide mean. The two items in Table Ten relating to state and local costs show that approximately seventy-five percent of the school districts in the Council's service area spend less per pupil unit for operating costs than the state-wide average. The term state and local oper-

ating costs refers to the cost per pupil unit of educating the district's students through the use of state and local funds, in a sense, with the funds made available through the Foundation Aid formula. This category relates operating costs to the actual number of pupils weighted according to kindergarten, elementary and secondary. The category state and local effective costs, unlike operating costs, relates all types of pupil units to operating costs, and therefore includes weightings for support units, fast growth units, AFDC units, as well as for both resident and non-resident students.

The most significant data that the School Finance Task Force studies regarding school finance is found in the categories EARC valuation per pupil unit and income per pupil unit in Table Ten. These categories show the inequities that plague the school districts in rural Minnesota, but especially those school districts in the heavily agricultural parts of the state--southern Minnesota and the Red River Valley area of Minnesota.

The only category in which the school districts in the council's service area scored above the state-wide mean was EARC valuation per pupil unit. The set of figures in Table Eleven, which show the EARC valuation per pupil unit for each school district in Minnesota, reveal that most school districts in the Countryside Council's service area are significantly higher than most of the school districts in the state in this category. When EARC valuation per pupil unit is compared with income per pupil unit we find that the legislature's intent that the Foundation Aid formula would place the burden of school district operating costs on those with the best ability to pay has failed in southwestern Minnesota.

In 1972-73, 69% of the school districts in the Council service area had an EARC valuation per pupil unit higher than the state-wide average; in 1973-74, the figure was 70%; in 1974-75, 77%; and in 1975-76, it was 81%. At the same time, income per pupil unit data show that in 1972-73, 95% of the school districts in the Council service area were under the state-wide average in this category; in 1974-75, the figure was 78% below; and in 1975-76, 86% below. Since higher EARC valuation mean that more and more of the burden for the school districts operating costs must come from local sources, it is clear that exactly those school districts with incomes substantially lower than the state-wide average are the school districts which must pick-up a disproportionate burden of the school districts operating costs. For example, in the Morgan school district, which receives no Foundation Aid in 1978-79, not only must the taxpayers in that district supply the revenue for the entire operating costs of the school district through their local property taxes, but they must also support the operating costs of other school districts through their state income and sales taxes. That this should happen is perfectly consistent with the principles of Foundation Aid to school districts. However, table eleven shows that the income simply isn't there in Morgan school district to justify that district supporting its own operating costs, and those of other districts in the state, some of which have higher income per pupil unit within their district.

The School Finance Task Force found that the reason for the inequities in the system of Foundation Aid in Minnesota could be traced to one fundamental cause--inflation has been unequal in its effects in Minnesota. The inflation in the market value of agricultural land has caused the value of that land to increase at a rate of twenty-three percent per year for the years 1975-1977, while inflation in metro residential property has increased that property's value at a rate of only eleven percent per year. Unequal inflation means an inequitable widening of EARC valuation within and among school districts. Department of Revenue figures show

that the inflation rate in agricultural land has slowed to approximately fifteen percent per year for 1978, and that inflation in the value of metro residential property has increased to approximately 20-22 percent per year. Regardless of this shift, it is clear that the market value of agricultural land has ceased to bear any relationship to the income-producing capability of that land, and that this fact has led to inequities in the school finance system in Minnesota.

The task force also found that the EARC is moving to a method of computing the adjusted assessed value of agricultural land which may redress the imbalance referred to in the preceding paragraph. The task force, however, considers this method to still contain the inequities tied up with using a speculative market value of land for the purposes of school district taxation. In order to clarify the reasons for the task force's first recommendation, this method needs to be addressed in some detail.

Before proceeding, however, it is relevant to state some of the concerns expressed by members of the task force regarding the reasons for the inflation in agricultural land. First and foremost among these reasons, is the vast amount of expansion buying that is occurring within the Council's service area. Well-established farmers are willing to pay exorbitant prices for more land, which they can average out over the cost of all their land, and this is driving the EARC valuation higher and higher. The effect of this practice is devastating to the economy and society of southwestern Minnesota. Not only does it drive everyone's school taxes up, but it drives the price of farmland up to a level where only those farmers with high equity can afford to buy it, with the result that young farm families cannot get a start in agriculture on their own land, and with the further consequence that fewer and fewer farmers will own more and more land and lead to the virtual extinction of farmers as a class within American society.

The EARC currently uses a method for computing the adjusted assessed value of agricultural land which seeks to relate that valuation to the productive capacity of the land by combining the indicated market value of land with the "free market gross rent" capitalized at the current rate of nine percent, and dividing this total by two. The figure for the "free market gross rent" on a given piece of land is determined by a rental study similar in methodology to the sales ratio studies already done by the EARC. As formulated by Douglas Tiffany in his "Determination of Rent-Capitalized Values of Farmlands," the formula for computing the free market gross rent can be outlined as follows.

The Department of Revenue decided to use what is called an aggregate approach. This means simply that the entire acerage of land in pasture, hay, and crops, within each county will be assumed, for the purposes of the study, to have been rented out under the crop-share arrangements which predominate within each respective county. The method, however, can be used on specific parcels of land as well. The formula, or perhaps method is the better word, uses five year averages for yields per each specific crop, and for prices per specific crop. The figures are actual figures taken from the Crop and Livestock Reporting Service. The method then multiplies the average yield per acre for each crop times the five year average price for each crop with the result being a dollar figure for the total return per acre. The landlord's share is determined simply by multiplying the total return per acre by the percentage share due the landlord

which gives the landlord's share of the return. Out of that figure the landlord's expenses per acre (excluding real estate taxes and interest on the land) are subtracted out giving the net return per acre to the landlord. If one wishes to determine the capitalized rental value of one parcel of land, the figure just arrived at is divided by .09. In the aggregate method, the total number of acres in the county are multiplied by the return to the landlord per acre, and then this value is capitalized at nine percent. In formula form, the method appears this way:

5 yr. ave. yield/acre X 5 yr. ave. price X landlord's share = landlord's share of return

Landlord's share of return - landlord's expenses = landlord's return per acre ÷ .09 = rent-capitalized value

The School Finance Task Force's recommendation One states that only this value be used in determining the adjusted assessed value for agricultural land, and that the indicated market value be dropped from consideration. This result of this recommendation will be that the tax paid on agricultural land for school district taxation purposes will reflect the anticipated annual earnings from the land, while the indicated market value will be dropped because it reflects the expectation of continuing high inflation as well as discounted earnings arising from the land in the future. (Tiffany, p. 4).

About the Citizens Countryside Council

The Citizens Countryside Council is a 67-member organization of concerned individuals representing 20 counties in west central and southwestern Minnesota and the post-secondary educational institutions serving the area: The Canby, Granite Falls, Jackson, Pipestone and Willmar Area Vocational Technical Institutes: Willmar and Worthington Community Colleges; Southwest State University and the University of Minnesota.

The people involved - homemakers, farmers, business and professional persons, educators, township officials and county commissioners, among others - are dedicated to improving the quality of life in the area that is their home. Together, they are engaged in a rural community development process to learn the ways of achieving agreed-upon objectives in resolving problems affecting their 19-county community.

Twenty-three County Chairpersons, representing each county and each of the four levels of higher education, serve as an executive committee for the Council.

The Council meets regularly to identify and develop approaches to the wide range of social and economic problems that challenge the 20-county segment of rural Minnesota. In a very real way, it is reviving on a broader scale the practical tradition of the old-fashioned work bee when individuals, families and settlements joined forces to harvest grain, to raise barns and build schoolhouses. Joined together as members of an identified rural community area, the Council seeks the resolution of problems and the development of programs too big for smaller groups to handle alone.

Its mission is to explore and expand countryside services in such challenge areas as: leadership and job training of locally elected and appointed officials; environmental study and research; human services delivery; community and regional development; and alternative ways to provide educational and cultural resources for the people of the region. To develop problem-solving strategies, the Council has organized research task forces to study the broad fields of rural transportation, economic development, job training for public officials, human services, the arts, housing and health care, natural resources and communications. These task forces are composed of concerned citizens and both faculty and students of the participating educational institutions.

At the end of their study of the assigned problem, the task forces report to the Council with their findings/recommendations. This statement is attached to one such report. By approving it the Council has become a strong advocate for implementation of the proposals it contains.

In addition to attacking problems through the task force process, the Council has assumed the responsibility of implementing many small but nonetheless vital rural development programs throughout the 20-county area. The majority of these programs involve the faculty and students thereby enabling the consortium of educational institutions to be of even greater service outside their campus boundaries.

This, then, is the Citizens Countryside Council, people with a purpose who have moved forward with increasing confidence in themselves and in each other toward their goals. Their objective is to make west central and southwestern Minnesota a better place in which to live.
